

## Climate Change and Environment Strategy 2020 - 2025

## **Action Plan**

Updated: 04/06/2021

| el of<br>trol | Related Priority Area  | Action Area             | Action   | Mitigation | Adaptation | Natura<br>Capita |  |  |
|---------------|--|-------------------------|--|------------|------------|------------------|--|--|
| TA            | TARGET 1: To reduce the Council's organisational net carbon footprint for scopes 1 and 2 from 1979.28 tonnes per annum in 2018-19 by 50% by 2023.                              |                         |  |            |            |                  |  |  |
| TA            | TARGET 2: All Council Directorates to implement measures to ensure their services are adapted to climate change in line with the National Adaptation Programme recommendations |                         |  |            |            |                  |  |  |
| TA            | ARGET 3: Deliver 20% biodiversity net  | gain across all Council | property, land projects and wildlife sites   |            |            |                  |  |  |
|               |  |                         | Continue to purchase 100% green electricity for all buildings and street lighting under County Council control.  | 1          | _          | _                |  |  |
|               |  |                         | Reduce the use of the electricity Transmission and distribution network through solar photovoltaic (PV) generation on our assets.  | 4          |            | _                |  |  |
|               |  |                         | Increase energy efficiency standards for existing buildings and develop a programme of improvements using 'invest to save' principles to reduce energy consumption by 20% by 2023.   | 4          | -          | -                |  |  |
|               |  |                         | Implement plan of property retrofitting to all buildings owned and occupied by the Council - aiming to be fossil fuel free (using renewable heating sources instead of gas or oil) by 2025.  | 4          | _          | _                |  |  |
| En            | MITIGATION:  | Buildings and utilities | Ensure all new Council buildings, extensions and retrofits are designed to the highest energy efficiency standards, incorporating renewable generation where feasible and Electric Vehicle (EV) chargepoint provision. Assessment of all buildings and implementation plan in place by 2023.   | 1          | -          |                  |  |  |
| Er            | nergy Efficicent, low carbon buildings ADAPTATION: Resilience of our services and  |                         | Improve measurement of refrigerant gases leakage, and replacement of air conditioning equipment with newer models that use gases with lower global warming potential and have lower leakage rates    Secure all new buildings extensions and retrefits are designed to incorporate measures to beaut resilience to source weather such as investigation and retrefits are designed to incorporate measures to beaut resilience to source weather such as investigation and retrefits are designed to incorporate measures to beaut resilience to source weather such as investigation. | 4          | -          | _                |  |  |
|               | supporting vulnerable people   |                         | Ensure all new buildings, extensions and retrofits are designed to incorporate measures to boost resilience to severe weather such as investing in new heat resistant /reflective materials, measures to enable staff to cope with extreme heat such as additional shading, and improved drainage design. Assessment of all buildings and implementation plan in place by 2023.  | _          | 4          | _                |  |  |
|               |  |                         | Audit properties and maintenance plans to identify opportunities and deliver enhancement to CCC's natural capital (e.g. enhancement of soft landscape for biodiversity)  | 4          | 4          | 1                |  |  |
|               |  |                         | Ensure all new buildings, extensions and retrofits are designed to incorporate measures to deliver environmental and biodiversity net gain including management plans, for example appropriate vegetation planting and sustainable drainage systems  |            | 4          | 1                |  |  |
|               |  |                         | Ensure all new buildings are adapted to water scarcity through the use of water saving measures (e.g. rainwater harvesting, greywater harvesting). Assessment of all buildings and implementation plan in place by 2023.   |            | 1          | 1                |  |  |
|               |  |                         | Ensure all buildings supporting important wildlife (e.g. bat roosts) have positive ecological management plans for their wildlife interest   |            | -          | 1                |  |  |
|               |  |                         | All buildings to have water saving devices   |            | 1          | <b>√</b>         |  |  |
|               |  |                         | New buildings to consider greywater reuse and include where possible   |            | - √        |                  |  |  |
|               |  |                         | Develop business continuity plans for sites and public buildings that will be subject to unacceptable increases in flood risk or sea level rise. Plan of potential locations in place by 2023.   |            | 4          |                  |  |  |
|               | NATURAL CAPITAL:<br>Green space, habitat and land<br>management  | Transport               | Investigate opportunities for zero or low emission highways, libraries and other fleet vehicles, including cargobikes  | 1          |            |                  |  |  |
|               |  |                         | Implement replacement of all pool cars and hire cars and vans to only use electric vehicles - aim to complete by 2025.  Investigate adding eCargobikes to the pool of vehicles available   | 4          | -          | _                |  |  |
|               |  |                         | Scope all Council buildings with car parks for suitabilty for work-place electric vehicle chargepoints, with chargepoints installed at all suitable sites by 2025  | 4          | -          | _                |  |  |
|               |  |                         | Encourage staff to use public transport or cycle where possible to minimise other business travel carbon emissions   | <b>√</b>   |            | _                |  |  |
|               |  |                         | Review Social and education transport, including consideration for how children can be best accommodated in local schools to reduce the need for education transport   | 4          | _          | _                |  |  |
|               |  |                         | Management of highways and other assets for climate change adaptation. E.g. Construct road surfaces with heat and flood resilient materials/designs to adapt to extreme heat and rainfall  |            | 4          | 1                |  |  |
|               |  |                         | Management of highways to deliver environment net gains, including management of verges for biodiversity value & ensure all wildlife sites are in positive conservation management. Assessment of all highways assets and implementation plan in place by 2023. Fully implement by 2030.   |            | _          | 1                |  |  |
|               |  |                         | Ensure all new transport schemes (e.g. cycleways, busways and roads) deliver environmental and biodiversity net gain. Assessment of all highways assets and implementation plan in place by 2023. Fully implement by 2030.   |            | 4          | 4                |  |  |
|               | ADAPTATION: Resilience of our services and supporting vulnerable people  | Services                | Through our Public Health, Social Care and Emergency Planning recovery functions, find ways to help manage the impacts on vulnerable people of severe weather or temperatures, including care homes, to prevent the vulnerable in our communities becoming more susceptible to the impacts of climate change.  | _          | 4          | -                |  |  |

| MITIGATION: Afforestation and Land<br>Use.<br>NATURAL CAPITAL: Green space,<br>habitats and land managment      | Farm Estate and other Land assets  | for nature by 2030.  |   |
|---|------------------------------------|--|---|
|   |                                    | Develop a Tree Strategy for the council's land assets to scope capacity for tree planting and appropriate species mosaic.  |   |
|   |                                    | All Council services scope their natural capital assets to deliver environmental and biodiversity net gain   | -                                       |
|   |                                    | Ensure all council owned wildlife sites (Local Nature Reserves, County Wildlife Sites and Sites of Special Scientific Interest) are in positive conservation management (e.g. surveyed every 5 years and managed for the benefit of their biodiversity interest) - complete by 2030  |   |
| NATURAL CAPITAL:<br>All   | Waste                              | Develop management and restoration plans for closed landfill sites to create natural habitats  |   |
|   |                                    | Work with the waste industry to identify disposal options for alternative to single use plastics   |   |
| All   | Financing change                   | Reform the annual budget planning process to reduce the Council's carbon footprint and to support wider decarbonisation of service delivery and the communities we support.  | 1                                       |
|   |                                    | Provide financing solutions for 'climate change mitigation, adaptation and natural capital'  | •                                       |
| All   |                                    | Develop compulsory training courses for all staff and training workshops for Members on climate change mitigation, adaptive measures and key environmental policies (e.g. NERC Act - to conserve biodiversity). Target 100% of staff trained by 2023.  | 1                                       |
|   | Organisational<br>learning         | Establish a group of Climate Champions to pilot Carbon Literacy training (https://carbonliteracy.com/) and Natural Capital Protocol decision making framework (https://naturalcapitalcoalition.org/wp-content/uploads/2018/05/NCC_Protocol_WEB_2016-07-12-1.pdf) to test these approaches for improved environmental decision making   | •                                       |
|   |                                    | All committee paper templates to be updated to incorporate a requirement for officer clearance of implications of climate change impacts, carbon footprints and adaptation and environmental impacts, to help inform decision making   | 1                                       |
|   |                                    | Identify mechanisms to improve the data provision for carbon footprinting, such that all data relevant to scope 1 and 2 greenhouse gas emissions is accurately measured and collected  | 4                                       |
| TARGET 4: To reduce the Council's scope   | e 3 emissions by 50.4%             | 6 by 2030 (subject to review whilst data collection methods for unknown emissions are set up during 2020/2021 to get a better understanding of total tonnes of CO <sub>2</sub> e)  |   |
| MITIGATION:<br>All  | Purchased goods and services       | Work with Cambridge University Science and Policy Exchange (CUSPE) to develop a methodology for calculating the carbon footprint for indirect carbon emissions (scope 3) (estimated 200,000 tonnes CO2e)   | 4                                       |
|   |                                    | Work with finance and services to improve data collection to inform the carbon footprint and other environmental impacts   | 4                                       |
| MITIGATION:<br>All  | Construction - use of<br>materials | Apply lifecycle analysis to the purchasing of construction goods and services to ensure minimisation of carbon emissions and waste (Please note: calculation currently unknown for construction materials but likely to be significant)  | •                                       |
| MITIGATION:   | Waste Disposal                     | Review disposal and treatment mechanisms for waste to identify solutions and their implementation that reduce carbon emissions, support circular economy   |   |
| Waste management  | waste Disposal                     | principles and reduce plastic pollution, in line with the contract timescales. The monitoring and measuring of these reductions will also be required.   | ,                                       |
| Waste management  | waste Disposal                     | principles and reduce plastic pollution, in line with the contract timescales. The monitoring and measuring of these reductions will also be required.  Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these improvements.  | `                                       |
| Waste management  MITIGATION: Energy Efficient, Low Carbon buildings  | Waste Disposal                     | Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these  | 1                                       |
| MITIGATION:<br>Energy Efficient, Low Carbon buildings   | Work with schools                  | Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these improvements.  Lifecycle heating and hot water replacements in schools to be fitted with low carbon solutions, offering energy performance contracts and heat agreements for   | •                                       |
| MITIGATION:<br>Energy Efficient, Low Carbon buildings<br>NATURAL CAPITAL:                                       | <u> </u>                           | Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these improvements.  Lifecycle heating and hot water replacements in schools to be fitted with low carbon solutions, offering energy performance contracts and heat agreements for schools to support this change  Encourage all schools to purchase 100% renewable electricity  Support maintained schools to enhance and manage their sites for natural capital, such as SuDS and biodiversity enhancement   |   |
| MITIGATION:<br>Energy Efficient, Low Carbon buildings   | <u> </u>                           | Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these improvements.  Lifecycle heating and hot water replacements in schools to be fitted with low carbon solutions, offering energy performance contracts and heat agreements for schools to support this change  Encourage all schools to purchase 100% renewable electricity  | •                                       |
| MITIGATION:<br>Energy Efficient, Low Carbon buildings<br>NATURAL CAPITAL:<br>Green spaces, habitats and land    | <u> </u>                           | Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these improvements.  Lifecycle heating and hot water replacements in schools to be fitted with low carbon solutions, offering energy performance contracts and heat agreements for schools to support this change  Encourage all schools to purchase 100% renewable electricity  Support maintained schools to enhance and manage their sites for natural capital, such as SuDS and biodiversity enhancement  Work with schools to develop a programme of education, helping schools deliver key messages to children on climate change, and what children (and their families)  | -                                       |
| MITIGATION:<br>Energy Efficient, Low Carbon buildings<br>NATURAL CAPITAL:<br>Green spaces, habitats and land    | <u> </u>                           | Support maintained schools to retrofit their buildings to improve energy efficiency, offering finance mechanisms to support schools to choose to make these improvements.
